>>> Features:>>> Enhance global contrast: The algorithm is based on the fact that human perception has a strong preference for greater local contrast in scene than the global scene contrast. A brighter dark region in the picture may draw attention and appear very sharp (or clear) to the human eyes, as opposed to a darker picture with too much contrast.>>> Enhance local contrast: On the other hand, it makes the detail and local sharpness of the picture sharper by emphasizing a little in the less contrast regions.>>> Create consistent contrast: It brings the image to look more natural by drawing attention to the dull and mediocre parts of the image, but keeping the bright spots intact.>>> Adjust contrast: You can adjust the contrast as you wish, by moving the curve to the left or right. >>> Create more natural images: The contrast-boosting algorithm can be used to create vivid, vivid images. The resulting images have a dramatic improvement of global and local contrast.>>> Note: The algorithm is best used with images that are very contrasty, such as images with highly saturated colors, sharp images, images with bright highlights and low image resolution.>>> Keywords: >>> Contrast, Contrast Enhancement, Contrast Boost, Brightness, Sharpness, Contrast Boost, Contrast Boost for Images, Contrast Boost for Video, Contrast Enhancement for 82157476af
